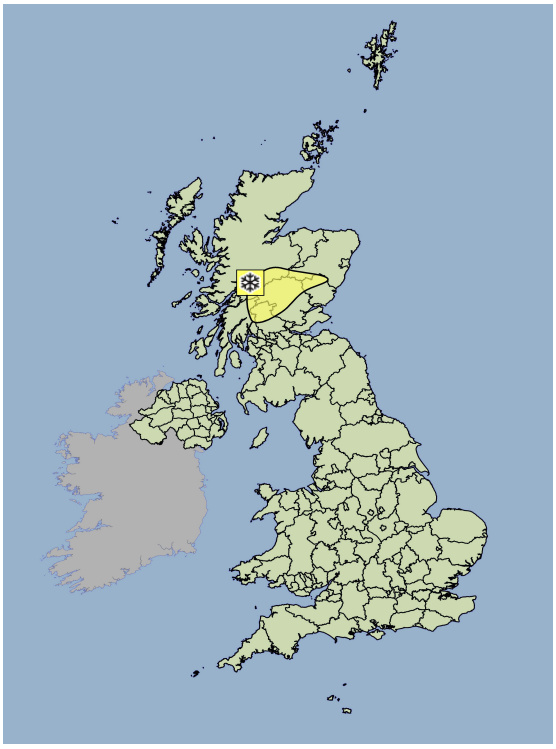
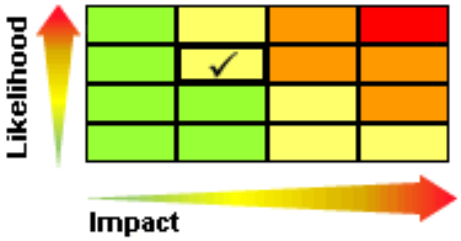
National Severe Weather Warning Service





Chief Forecasters Assessment
An Atlantic frontal system will push eastwards into Scotland later on Tuesday, and as it meets the colder airmass here a spell of snow is expected on higher ground. The greatest risk of snow will be across higher routes across the Southern and Eastern Highlands before it turns milder, allowing a thaw to set in before midnight. Some temporary slushy falls are also possible over higher roads in the Southern Uplands, but here the snow will quickly turn to rain in the evening.

The Met Office have issued a **Yellow Alert** of **Snow**

Valid from **16:00 on Tue, 14th Jan 2014** until **23:00 on Tue, 14th Jan 2014**

A band of rain reaching the west coast later on Tuesday afternoon will spread eastwards across Scotland in the evening, and will be preceded by a spell of snow on high ground, especially to the north of the Central Lowlands. 2-5cm may accumulate above 200-300m with perhaps 10cm on the highest routes above 400m before it turns to rain later in the evening. The public are advised to take extra care and be aware of the risk of difficult driving conditions and some minor travel disruption.
